SUMMARY

5+ years of experience in backend development, cloud-native solutions, and **data engineering**. Skilled in building **scalable microservices architectures** using **Python and AWS**, and **Snowflake** data platforms powered by **AI agents** (Cortex Agents, semantic views, RAG). Expertise in database integrations (**Postgres, DynamoDB, MongoDB, Snowflake**), automated data-quality validation, and real-time communication systems. Adept at collaborating in cross-functional teams and passionate about delivering innovative, efficient solutions that drive measurable impact.

EXPERIENCE

Data & AI Engineer | Inetum · Lima, Peru — 2026 – Present

Data and AI engineering for Belcorp's enterprise data platform on **Snowflake** and **AWS**. Built **Snowflake Cortex Agents** over **semantic views** (text-to-SQL) and **Cortex Search** (RAG) so business teams can query sales, collections, and digital data in natural language, plus **MCP servers** (Node.js/TypeScript) connecting AI assistants to Confluence, GitHub, S3, and PostgreSQL.

- **Built a CI/CD framework for Cortex Agents, semantic views, and Cortex Search** (Python, GitHub Actions) with PR dry-run checks and smart-diff deploys that avoid costly re-indexing across DEV and PROD.
- **Designed Snowflake Intelligence agents that automate data work**: an agent-builder assistant that creates and registers governed agents, and an agent that drafts data user stories via RAG.
- **Automated data-quality validation** with Snowflake stored procedures and JSON test contracts, and built a daily Snowflake consumption and cost pipeline for FinOps visibility.

Full Stack Developer | BrandSolo · Arequipa, Peru — 2025 – 2026

Designed, implemented, and maintained large-scale web scraping systems using **Scrapy**, covering the full data extraction lifecycle from spider development to validation, normalization, and multi-database synchronization. Built resilient pipelines for dynamic, JavaScript-rendered e-commerce platforms, anti-bot protections, and high data volumes. Integrated **AWS services** (S3, EC2, RDS, CloudWatch) for scalable storage, reliable execution, and centralized monitoring.

- **Designed and implemented a multi-stage scraping pipeline** that automated daily product ingestion across multiple e-commerce platforms, improving data availability and consistency between production and portal databases.
- **Optimized data processing and storage workflows** by integrating Amazon S3 for image hosting and AWS CloudWatch for monitoring, increasing system reliability and operational visibility.

Python Developer | Level Up Technology · New York, USA — 2023 – 2025

Designed, built, and optimized high-performance backend APIs using **Python (Flask)**, owning the full API lifecycle from architecture and implementation to testing, deployment, and continuous optimization. Engineered scalable data-processing solutions using **MongoDB**, handling high-volume datasets with efficient querying and storage strategies. Applied parallel processing techniques to improve throughput and reduce latency.

- Increased core processing performance by **4×** by designing and implementing parallelization strategies, significantly reducing response times and improving system efficiency.
- Integrated and optimized **MongoDB** for large-scale data storage and querying, enabling scalable and reliable performance for data-intensive backend services.

EDUCATION

M.Sc. in Data Science | San Pablo Catholic University — 2024 – Present

B.Sc. in Computer Science | San Pablo Catholic University — 2017 – 2022

PROJECTS

Collyn | Order Management SaaS — collyn.vercel.app

Full-stack order management platform enabling real-time tracking and client order lifecycle management. **React/TypeScript** frontend, **Django/Python** REST API, **PostgreSQL** database.

Somer | Inventory Management System — somer-web.vercel.app

Multi-store inventory system for tracking product entries, stock movements, and distribution workflows. **React/TypeScript** frontend, **Django/Python** REST API, **PostgreSQL** database.
